Investment Strategy	<p>The scheme is an Index Fund tracking the Nifty 50 Total Returns Index. The Scheme will be passively managed employing an investment strategy that seeks to track/replicate the performance of the underlying index, subject to tracking error. The scheme seeks to achieve this goal by investing in the securities constituting the Nifty 50 Total Returns Index in the same proportion as in the Index.</p> <p>The scheme may take exposure to derivative instruments on underlying index (stock/ index futures) up to 20% of the Net Assets. Derivatives shall mean derivatives instruments as permitted by SEBI, including derivative exposure in accordance with SEBI Master Circular dated June 27, 2024 and such other amendments issued by SEBI from time to time. The Scheme may take an exposure to equity derivatives of constituents of the underlying Basket when securities of the Basket are unavailable, insufficient or for rebalancing at the time of change in Basket or in case of corporate actions, for a short period of time, subject to derivative limits. Such exposure to derivatives will be rebalanced within seven calendar days. The Scheme may use derivative instruments such as stock futures and options contracts, swap agreements or any other derivative instruments that are permissible or may be permissible in future under applicable regulations and such investments shall be in accordance with the investment objective of the Scheme. Derivative limit subject to limit of 20% of net assets.</p>
Risk Profile of the Scheme	<p>Scheme Specific Risk Factors</p> <p>The Scheme specific risk factors are summarized as follows:</p> <p>The scheme tracks benchmark index which may comprise of large Indian blue-chip stocks. The scheme being passively managed invests in stocks of the underlying index and will therefore be subject to the risks associated with concentration of investments in a particular company/sector.</p> <p>Right to Limit Redemptions: The Trustee, in the general interest of the Unit holders of the Scheme offered in this Document and keeping in view the unforeseen circumstances / unusual market conditions, may limit the total number of Units which can be redeemed on any Business Day. The same shall be in accordance with para 1.12 of SEBI Master circular dated June 27, 2024.</p> <p><u>Risks associated with investing in Equities:</u></p> <ul style="list-style-type: none"> Trading volumes, settlement periods and transfer procedures may restrict the liquidity of these investments. Different segments of the Indian financial markets have different settlement periods, and such periods may be extended significantly by unforeseen circumstances. The inability of the Schemes to make intended securities purchases due to settlement problems could cause the Schemes to miss certain investment opportunities. The value of the Schemes' investments in Equity & Equity related instruments may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the NAV of the Units of the Schemes may fluctuate and can go up or down. The Mutual Fund may not be able to sell securities, which can lead to temporary illiquidity. There are risks inherent in securities lending, including the risk of failure of the other party, in this case the approved intermediary to comply with the terms of the agreement. Such failure can result in a possible loss of rights to be collateral, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of corporate benefits accruing thereon.

- Investors may note that IDCW is due only when declared and there is no assurance that a company (even though it may have a track record of payment of IDCW in the past) may continue paying IDCW in future. As such, the schemes are vulnerable to instances where investments in securities may not earn IDCW or where lesser IDCW is declared by a company in subsequent years in which investments are made by schemes. As the profitability of companies are likely to vary and have a material bearing on their ability to declare and pay IDCW, the performance of the schemes may be adversely affected due to such factors.
- While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges. The liquidity of the Schemes' investments is inherently restricted by trading volumes in the securities in which it invests.
- The Scheme may find itself invested in unlisted securities due to external events or corporate actions. This may increase the risk of the portfolio as these unlisted securities are inherently illiquid in nature and carry larger liquidity risk as compared to the listed securities or those that offer other exit options to the investors.
- Fund manager endeavors to generate returns based on certain past statistical trend. The performance of the schemes may get affected if there is a change in the said trend. There can be no assurance that such historical trends will continue.
- The schemes are also vulnerable to movements in the prices of securities invested by the schemes which again could have a material bearing on the overall returns from the schemes. These stocks, at times, may be relatively less liquid as compared to growth stocks.
- Changes in Government policy in general and changes in tax benefits applicable to mutual funds may impact the returns to investors in the Schemes or business prospects of the Company in any particular sector.

Risks associated with Index Funds:

- Investments in the securities constituting the Index are subject to price fluctuation on daily basis. The volatility in the value of those securities is due to various micro and macroeconomic factors like economic and political developments, changes in interest rates, etc. affecting the securities markets. This may have adverse impact on the NAV of Scheme.
- The NAV of the Index fund reflects the valuation of its investment and any changes in market value of its investments would have a bearing on its NAV.
- **Market Risk:** The Index funds NAV will react to stock market movements. The value of investments in the scheme may go down over a short or long period due to fluctuations underlying securities in response to factors such as performance of companies whose stock comprises the underlying portfolio, economic and political developments, changes in government policies, changes in interest rates, inflation and other monetary factors causing movement in prices.
- **Index-Related Risk:** The Index funds invests in securities of the Nifty 50 Total Returns Index and in the same proportion as the securities have in the Index. Hence, the risk associated with the corresponding Index would be applicable to the index fund. The Index may have its own criteria and policy for inclusion/exclusion of securities from the Index, its maintenance thereof and effecting corporate actions. The Index fund would invest in the securities of the Index regardless of investment merit, research, without taking a view of the market and without adopting any defensive measures. The Index fund would not select securities in which it wants to invest but is guided by the Index. As such the Index fund is not actively managed but is passively managed. There is no guarantee that the Index funds will achieve a high degree of correlation to the underlying Index and therefore achieve its investment objective.
- **Index Dissolution Risk:** In the event the Nifty 50 Index is dissolved or is withdrawn by NSE Indices Limited (formerly known as India Index Services & Products Limited ("IISL")), the Trustee reserves a right to modify the scheme so as to track a different and suitable index and appropriate intimation will be sent to the Unit Holders of the scheme.
- **Management Risk:** As the Index fund may not fully replicate the underlying Index, it is subject to the risk that investment strategy may not produce the intended results.
- **Concentration Risk:** The Index fund may be susceptible to an increased risk of loss, including losses due to adverse occurrences affecting the index fund more than the market, to the extent that the investments are concentrated in the securities of a particular issuer or issuers, country, group of countries, region, market, industry, group of industries, sector or asset class.
- In certain cases, settlement periods may be extended significantly by unforeseen circumstances.

	<p>The inability of the Index Fund to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities as in certain cases, settlement periods may be extended significantly by unforeseen circumstances. Similarly, the inability to sell securities held in the Index Fund portfolio may result, at times, in potential losses to the Scheme, and there can be a subsequent decline in the value of the securities held in the Index Fund.</p> <ul style="list-style-type: none"> • Passive Investments: The Index fund is not actively managed. Since the Scheme is linked to an index, it may be affected by a general decline in the securities constituting that index. The Scheme as per its investment objective invests in the securities of the underlying index regardless of their investment merit. • Equity Securities Risk: Equity securities are subject to changes in value and their values may be more volatile than those of other asset classes. <p>Risks associated with investing in fixed income securities:</p> <ul style="list-style-type: none"> • Credit and Counterparty risk: Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security or honor its contractual obligations). Counterparty risk refers to the counterparty's inability to honor its commitments (payment, delivery, repayment, etc.) and to risk of default. This risk relates to the quality of the counterparty to which the scheme has exposures. Losses can occur in particular for the settlement/delivery of financial instruments or the conclusion of financial derivatives contracts. Liquidity Risk: The liquidity of the scheme's investment is inherently restricted by trading volumes in the securities in which the scheme invests. A lower level of liquidity affecting an individual security or an entire market at the same time, may have an adverse bearing on the value of the scheme's assets. Interest Rate Risk & Re-investment Risk: Interest rates may be influenced by several elements or events, such as monetary policy, discount rate, inflation, etc. Any impact of interest rate changes would be higher on securities with higher duration. Reinvestment risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed. • Sovereign risk: The credit risk on such Government securities is even lower than that on non-government securities "AAA" rating and hence yields on government securities are even lower than yields on non-government securities with "AAA" rating. • Concentration Risk: The Scheme may pursue only a limited degree of diversification. It may invest in a limited number of securities or invest a greater proportion of assets in the securities of very few issuers (within the limits permitted by regulation) or be concentrated on a few market sectors as compared to a diversified scheme. The scheme is also expected to have higher market liquidity risk on account of concentration. <p>Risk Factors associated with Investments in Derivatives:</p> <p>The Scheme(s) may use various derivative instruments and techniques, permitted within SEBI (Mutual Funds) Regulations, 1996 from time to time including but not limited for portfolio balancing and hedging purpose, which may increase the volatility of Scheme's performance. Usage of derivatives will expose the Scheme(s) to certain risks inherent to such derivatives.</p> <p>Derivative products are specialized instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional investments.</p> <p>The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. There is a possibility that a loss may be sustained by the Scheme(s) as a result of the failure of another party (usually referred to as the "counterparty") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, interest rates and indices. Even a small price movement in the underlying instrument could have a large impact on their value. This could increase the volatility of the Scheme's performance.</p> <p>In case of hedge, it is possible that derivative positions may not be perfectly in line with the underlying assets they are hedging. As a consequence the derivative cannot be expected to perfectly hedge the risk</p>
--	--

of the underlying assets. This also increases the volatility of the Scheme's performance. Some of the risks inherent to derivatives investments include:

1. **Price Risk:** Despite the risk mitigation provided by various derivative instruments, there remains an inherent price risk which may result in losses exceeding actual underlying.
2. **Valuation Risk:** The risk in valuing the Debt & Equity derivative products due to inadequate trading data with good volumes. Derivatives with longer duration would have higher risk viz
3. **Mark to Market Risk:** The day-to-day potential for an investor to experience losses from fluctuations in underlying stock prices and derivatives prices.
4. **Systematic Risk:** The risk inherent in the capital market due to macro economic factors like inflation, GDP, Global Events etc
5. **Default Risk:** This is the risk that losses will be incurred due to default by counter party. This is also known as credit risk or counterparty risk.
6. **Basis Risk:** This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying being hedged for e.g., mismatch between the maturity date of the futures and the actual selling date of the asset.
7. **Limitations on upside:** Derivatives when used as hedging tool can also limit the profits from a genuine investment transaction.
8. **Liquidity risk:** This risk pertains to how saleable a security is in the market. All securities/instruments irrespective of whether they are equity, bonds or derivatives may be exposed to liquidity risk (when the sellers outnumber buyers) which may impact returns while exiting opportunities.
9. **Implied Volatility:** The estimated volatility of an underlying security's price and derivatives price.
10. **System risk:** The risk arising due to failure of operational processes followed by the exchanges and OTC participants for the derivatives trading.
11. **Systematic Risk:** The risk inherent in the capital market due to macro economic factors like Inflation, GDP, Global events

Risks associated with investments in mutual fund units

To the extent of the investments made by the scheme in mutual funds units, the risks associated with investing in such funds like market risk, credit & default risk, liquidity risk, redemption risk including the possible loss of principal; etc. will exist.

Risks associated with Securities Lending & Borrowing (SLB)

Securities lending is lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed.

The risks in security lending consist of the failure of intermediary/counterparty, to comply with the terms of agreement entered into between the lender of securities i.e. the Scheme and the intermediary/counterparty. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The scheme may not be able to sell lent out securities, which can lead to temporary illiquidity & loss of opportunity.

Other Risks:

- **Risk associated with inflation:** Over time, yields of short-term investments may not keep pace with inflation, leading to a reduction in an investment's purchasing power.
- **Legal risk:** The scheme may be affected by the actions of government and regulatory bodies. Legislation could be imposed retrospectively or may be issued in the form of internal regulations which the public may not be aware of. Legislation (including legislation relating to tax) or regulation may be introduced which inhibits the scheme from pursuing their strategies or which renders an existing strategy less profitable than anticipated. Such actions may take any form, for example nationalization of any institution or restrictions on investment strategies in any given market sector or changing requirements and imposed without prior warning by any regulator.
- **Taxation risk:** The value of an investment may be affected by the application of tax laws, including withholding tax, or changes in government or economic or monetary policy from time to time. As such,

	<p>no guarantee can be given that the financial objectives will actually be achieved. The tax information described in this Scheme Information Document (SID) is as available under the prevailing taxation laws. This could be changed at any moment by regulation. Further, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of an investment in the scheme will endure indefinitely.</p> <ul style="list-style-type: none"> • Valuation risk: This risk relates to the fact that markets, in specific situations and due to lack of volumes of transactions, do not enable an accurate assessment of the fair value of invested assets. In such cases, valuation risk represents the possibility that, when a financial instrument matures or is sold in the market, the amount received is less than anticipated, incurring a loss to the portfolio and therefore impacting negatively the NAV of the scheme. • Operational Risk: Operational risk addresses the risk of trading and back office or administration issues that may result in a loss to the Scheme. This could be the result of oversight, ineffective securities processing procedures, computer systems problems or human error. There could also be risk associated with grouping of orders. For instance, at the time of placing the trades, the fund manager shall group orders on behalf of all schemes managed by him, provided it is unlikely to be detrimental overall for any of the schemes whose orders have been included. However, such grouping may have a detrimental effect to the scheme compared to the execution of an individual order for the scheme. • Risk factors associated with processing of transaction in case of investors investing in mutual fund units through Stock Exchange Mechanism: The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE or any other recognized stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing / settlement, etc. upon which the Fund and the AMC have no control. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s) upon which the Fund and the AMC have no control. Accordingly, there could be negative impacts to the investors such as delay or failure in allotment / redemption of Units. The Fund and the AMC are not responsible for the negative impacts. • Tracking Error Risk: Tracking error is defined as the standard deviation of the difference between the daily returns of the Underlying index and NAV of the scheme. The scheme's returns may deviate from the underlying benchmark index for the following reasons: <ul style="list-style-type: none"> • Fees & expenditure incurred by the scheme. • Cash held by the scheme due to subscriptions or to meet redemptions, expenses etc. • Corporate Actions • Halting of trading in underlying securities by exchange • Methodology of calculation of settlement price of the index. The benchmark or underlying index reflects the Volume Weighted Average Price (VWAP) of securities in the last half hour. However, the scheme may buy and sell at different points in time during the trading session at the then prevailing prices which may not correspond to the closing prices on the exchange. • Inability to acquire the securities due to various reasons like circuit filters, lack of liquidity etc. • Delay in replicating the portfolio during times of high volatility and reconstitution/rebalancing of index. • Rounding off securities for buying or selling as compared to the underlying index. <p>The AMC and fund manager would monitor the tracking error of the scheme on an ongoing basis and would seek to keep tracking error as low as possible. Under normal circumstances and as per SEBI regulation, it would not cross 2% per annum. However, in case of various market events beyond the control of AMC or fund manager like dividend issuance by constituent members, rights issuance by constituent members, market volatility during reconstitution and rebalancing of portfolio and any abnormal circumstances, tracking error may exceed the prescribed limits. There can be no assurance or guarantee that the scheme will achieve any particular level of tracking error relative to performance of the Underlying Index</p> <p><u>Risks associated with segregated portfolio:</u></p> <ul style="list-style-type: none"> • Investor holding units of segregated portfolio may not able to liquidate their holding till the time recovery of money from the issuer.
--	--

- Security comprises of segregated portfolio may not realise any value.
- Listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.
- Trading in the units of segregated portfolio on the Exchange may be halted because of market conditions, including any halt in the operations of Depository Participants or for reasons that in view of the Exchange Authorities or SEBI, trading in the units is suspended and / or restricted. In addition, trading in units is subject to trading halts caused by extraordinary market volatility and pursuant to stock exchange rules of 'circuit filter'. There can be no assurance that the requirements of Stock Exchange necessary to maintain the listing of units of scheme will continue to be met or will remain unchanged.

Tracking Error Risk:

The Fund Manager would not be able to invest the entire corpus exactly in the same proportion as in the underlying index due to certain factors such as the fees and expenses of the Scheme, corporate actions, cash balance and changes to the underlying index and regulatory restrictions, lack of liquidity which may result in Tracking Error. Hence it may affect AMC's ability to achieve close correlation with the underlying index of the Scheme. The Scheme's returns may therefore deviate from its underlying index. "Tracking Error" is defined as the standard deviation of the difference between daily returns of the underlying index and the NAV of the Scheme. The Fund Manager would monitor the Tracking Error of the Scheme on an ongoing basis and would seek to minimize the Tracking Error to the maximum extent possible.

Tracking errors are inherent in any index fund and such errors may cause the scheme to generate returns which are not in line with the performance of the NIFTY 50 Index or one or more securities covered by / included in the NIFTY 50 Index and may arise from a variety of factors including but not limited to:

1. Any delay in the purchase or sale of securities due to illiquidity in the market, settlement and realisation of sales proceeds, delay in credit of securities or in receipt and consequent reinvestment of dividend, etc.
2. The index reflects the prices of securities at a point in time, which is the price at close of business day on the stock exchange. The scheme, however, may trade the securities at different points in time during the trading session and therefore the prices at which the scheme trades may not be identical to the closing price of each scrip on that day on the respective stock exchange. In addition, the scheme may opt to trade the same securities on different exchanges due to price or liquidity factors, which may also result in traded prices being at variance from the closing price considered in the Index.
3. NSE Indices Limited undertakes periodic reviews of the securities that are represented in the NIFTY 50 Index and from time to time may exclude existing securities or include new ones. In such an event, the scheme will reallocate its portfolio to mirror the changes. However, there allocation process may not occur instantaneously and may not permit precise mirroring of the NIFTY 50 Index during this period.
4. The potential of trades to fail may result in the scheme not having acquired the security at the price necessary to mirror the index.
5. Transaction and other expenses, such as but not limited to brokerage, custody, trustee and investment management fees.
6. Being an open ended scheme, the scheme may hold appropriate levels of cash or cash equivalents to meet on going redemptions.
7. The scheme may not be able to acquire or sell the desired number of securities due to conditions prevailing in the securities market, such as, but not restricted to circuit filters in the securities, liquidity and volatility in security prices.

The Scheme will disclose the tracking error based on past one year rolling data, on a daily basis, on the website of AMC and AMFI. In case the Scheme has been in existence for a period of less than one year, the annualized standard deviation shall be calculated based on available data.

Tracking Difference: The tracking difference i.e. the annualized difference of daily returns between the index and the NAV of the Scheme will be disclosed on the website of the AMC and AMFI, on a monthly basis, for tenures 1 year, 3 year, 5 year, 10 year and since the date of allotment of units.

The annualized tracking difference averaged over one year period shall not exceed 1.25%. In case the average annualized tracking difference over one year period for the Scheme is higher than 1.25%, the same will be brought to the notice of trustees with corrective actions taken by the AMC, if any

	<p>Passive Investments: The Scheme is not actively managed. Since the Scheme is linked to index, it may be affected by a general decline in the Indian markets relating to its underlying index. The Scheme as per its investment objective invests in Securities which are constituents of its underlying index regardless of their investment merit. The AMC does not attempt to individually select stocks or to take defensive positions in declining markets.</p> <p><u>Risk factors associated with processing of transaction in case of investors investing in mutual fund units through Stock Exchange Mechanism</u> The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE or any other recognized stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing / settlement, etc. upon which the Fund and the AMC have no control. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s) upon which the Fund and the AMC have no control. Accordingly, there could be negative impacts to the investors such as delay or failure in allotment / redemption of Units. The Fund and the AMC are not responsible for the negative impacts.</p> <p><u>Other Risks of the Scheme may include</u> Risk associated with inflation, legal risk, Taxation risk, Valuation risk, Operational risk etc.</p> <p><u>Please refer to the SID for detailed risk factors and risk control measures.</u></p>
