EQUITY SCHEMES - RISK FACTORS

STANDARD RISK FACTORS:

- (i) Investments in mutual fund units involves investment risks such as market risk, credit & default risk, liquidity risk, trading volumes, settlement risk, including the possible loss of principal.
- (ii) As the price / value / interest rates of the securities including ETFs in which the scheme invests fluctuate, the value of your investment in the schemes may go up or down. The various factors which impact the value of the scheme's investments include, but are not limited to, fluctuations in the bond markets, fluctuations in interest rates, fluctuations in gold prices, prevailing political and economic environment, changes in government policy, factors specific to the issuer of the securities, tax laws, liquidity of the underlying instruments, settlement periods, trading volumes, etc.
- (iii) Past performance of the Sponsor / AMC / Mutual Fund does not guarantee future performance of the schemes.
- (iv) BNP Paribas Equity Fund, BNP Paribas Dividend Yield Fund, BNP Paribas Long Term Equity Fund and BNP Paribas Mid Cap Fund are the names of the schemes and do not in any manner indicate either the quality of the schemes or its future prospects and returns.
- (v) The sponsor / associates are not responsible or liable for any loss resulting from the operation of the schemes beyond the initial contribution of ₹ 1,00,000 (Rupees One lakh only) to the corpus of the Mutual Fund made by it towards setting up the Fund.
- (vi) The present schemes are not guaranteed or assured return schemes.

SCHEMES SPECIFIC RISK FACTORS:

(I) Market Risk:

All mutual funds and securities investments are subject to market risk and there can be no assurance / guarantee that the scheme's objectives will

be achieved. The securities that the schemes invest in would be exposed to price changes on a day-to-day basis. These price changes may occur due to instrument specific factors as well as general macroeconomic conditions.

Markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market, or economic developments. The schemes may be subject to price volatility due to factors such as interest sensitivity, market perception, and creditworthiness of issuer and market liquidity.

Different parts of the market can react differently to these developments. The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole.

(II) Risk associated with schemes investing in Equities:

The risks associated with investments in equities and similar instruments include significant fluctuations in prices. The impact of fluctuations is likely to be accentuated for short-term investments. The risk that the performance of one or more companies declines or stagnates may have a negative impact on the performance of the Schemes as a whole at any given time.

Stock markets are volatile and can decline significantly in response to political, regulatory, economic, market and stock-specific developments etc. Different parts of the market can react differently to these developments. The stock-specific volatility may also change over a period of time as the characteristic of the stock undergoes a change in terms of market-cap category. The Schemes may hold such securities for only a very short time, which could tend to increase the costs.

The Schemes may invest in growth stocks which may be more volatile than the market in general and may react differently to economic, political and market developments and to specific information about the issuer.

EQUITY SCHEMES - RISK FACTORS (Contd..)

Growth stocks traditionally show higher volatility than other stocks, especially over short periods. These stocks may also be more expensive in relation to their profits than the market in general. Consequently, growth stocks may react with more volatility to variations in profit growth.

The Fund Manager may temporarily adopt a more defensive approach if it considers that the equity market or economy is experiencing excessive volatility, a persistent general decline, or other unfavorable conditions. In such circumstances, the Schemes may be unable to achieve or pursue its investment objective.

The Schemes may invest in companies making an initial public offering. In such cases there is a risk that the price of the newly floated share is more volatile due to factors such as the absence of previous trading, unseasonal transactions and the limited number of securities available for trading.

In the event that investible funds of more than 65% of the total proceeds in the Schemes are not invested in equity shares of domestic companies, the tax exemption on income distribution will not be available to the Unit Holders

Concentration Risk: The schemes may pursue only a limited degree of diversification. It may invest a greater proportion of assets in the securities of very few issuers (within the limits permitted by regulation) or be concentrated on a few market sectors as compared to a diversified schemes. This could have implications on the performance of the schemes. The schemes may be more sensitive to economic, business, political or other changes and this may lead to sizeable fluctuation in the Net Asset Value of the schemes.

(III) Risk factors specific to BNP Paribas Dividend Yield Fund

- Though investments would be made in companies with high dividend yield, the performance of the scheme would inter alia depend on the ability of these companies to sustain dividends in future.
- High dividend yield stocks may be less liquid in terms of trading volumes in the stock markets and hence the impact cost and portfolio liquidity risk is commensurately higher.
- The securities in the Scheme may be predominantly characterized by a stock selection where more emphasis is on stock valuation and less on earnings growth (the 'value' style). There could be time periods when securities of this nature may underperform relative to other stocks in the market. This could impact performance.
- The Scheme retains the flexibility to hold from time to time relatively more concentrated investments in a few sectors as compared to plain diversified equity funds. This may make the Scheme vulnerable to factors that may affect these sectors in specific and may be subject to a greater level of market risk leading to increased volatility in the Scheme's NAV.

(IV) Risk factors specific to BNP Paribas Long Term Equity Fund

Units purchased in the Scheme cannot be assigned / transferred / pledged / redeemed / switched out until the completion of 3 years from the date of allotment of the respective Unit.

(V) Risk factors specific to BNP Paribas Mid Cap Fund

- It is important to note that mid / small cap stocks can be riskier and more volatile on a relative basis; although middle and smaller capitalization stocks provide one an opportunity to go beyond the usual large blue chip stocks and present possible higher capital appreciation. Therefore, the risk levels of investing in small cap and mid cap stocks is more than investing in stocks of large well established companies. Please note that over a time these two categories have demonstrated different levels of volatility and investment returns. And it is important to note that generally, no one class consistently outperforms the others. While smaller and medium size companies may offer substantial opportunities for capital appreciation, they also involve substantial risks. Historically, these companies have been more volatile in price than larger company securities, especially over the short term.
- Smaller companies are subject to lesser growth prospects & lower degree of liquidity leading to greater price volatility and greater sensitivity of smaller companies to changing economic conditions. Smaller Companies carry large amount of liquidity risk compared to Large Cap companies, as the ability to sell is limited by overall trading volume of the securities, in which it invests. In addition, smaller companies may lack depth of management, may not be able to generate funds necessary for growth or development, or developing or marketing new products or for services for which markets are not yet established. They could also suffer from disadvantages such as - outdated technologies, lack of bargaining power with suppliers, low

entry barriers and inadequate management depth. Overall, the risks of investing in medium / small companies are (a) transparency / liquidity levels may not be on par with established, large cap companies; (b) corporate governance may be an issue with some companies; and (c) they may not be resilient enough to withstand shocks of business / economic cycles.

(VI) Risks associated with schemes investing in fixed income securities:

- **Credit and Counterparty Risk:** Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security or honor its contractual obligations).

Counter party risk refers to the counter party's inability to honor its commitments (payment, delivery, repayment, etc.) and to risk of default. This risk relates to the quality of the counter party on which the fund has exposures. Losses can occur in particular for the settlement / delivery of financial instruments or the conclusion of financial derivatives contracts

- The value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit and counter party risk as well as any actual event of default.

If the credit rating of an issue, issuer or counter party is downgraded this may cause the value of the related debt securities in which the scheme has invested to fall.

The severity of the risk varies depending on the quality of the securities and derivatives in the scheme. To the extent that the scheme invests in high-yield bonds, this presents a higher than average risk. There are different types of debentures available in the market. Some of them could be more risky. Lower-quality debt securities and certain types of securities involve greater risk of default or price changes due to changes in the credit quality of the issuer. They are not in the first rank of debts in case of default. The value of lower-quality debt securities and certain types of other securities can be more volatile due to increased sensitivity to adverse issuer, political, regulatory, market or economic developments.

- **Liquidity Risk:** The liquidity of the scheme's investment is inherently restricted by trading volumes in the securities in which the schemes invest. A lower level of liquidity affecting an individual security or derivative or an entire market at the same time, may have an adverse bearing on the value of the scheme's assets. More importantly, this may affect the scheme's ability to sell particular securities and derivatives quickly enough to minimise impact cost, as and when necessary to meet requirements of liquidity or to sell securities in response to triggers such as a specific economic / corporate event. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of a few or all of the investments and may affect the liquidity of the investments of the schemes. Transactions in ETFs can also become restricted. The schemes may be unable to implement purchase or sale decisions when the markets turn illiquid, missing some investment opportunities or limiting ability to face redemptions. The lack of liquidity could also lead to the risk that the sale price of a security could be substantially lower than the fair value of the security.

- **Treatment and disposal of illiquid securities / NPAs at the time of maturity / closure of the scheme:** Such securities will be valued in good faith in accordance with the Valuation Policy. Further SEBI regulations / provisions (vide SEBI Circular - MFD/CIR/05/432/2002 dated June 20, 2002) shall apply for such securities. Accordingly any amount realized by the mutual fund after the winding up of the schemes from such NPAs and illiquid securities, if substantial and realized within two years shall be distributed back to the investors. In case the amount is not substantial or it is realized after two years, it may be transferred to the Investor Education Fund maintained as specified in SEBI circular MFD/CIR/9/120/2000 dated November 24, 2000. The decision as to the determination of substantial amount shall be taken by the trustees of mutual fund after considering the relevant factors

- **Sovereign risk:** The Central Government of India is the issuer of the local currency debt in India. The Government raises money to meet its capital and revenue expenditure by issuing debt or discounted securities. Since payment of interest and principal amount has a sovereign status implying least probability of a default, such securities are known as securities with sovereign credit. It also implies that the credit risk on such Government securities is even lower than that on non-government securities with "AAA" rating and hence yields on government securities are even lower than yields on non-government securities with "AAA" rating.

EQUITY SCHEMES - RISK FACTORS (Contd..)

- **Interest Rate Risk and Re-investment Risk:** The value of an investment may be affected by interest rate fluctuations. Interest rates may be influenced by several elements or events, such as monetary policy, the discount rate, inflation, etc. The value of debt and fixed income securities held by the schemes generally will vary inversely with the changes in prevailing interest rates. Further, securities of any issuer that has higher duration could be more risky in terms of price movements relative to those with lower duration. The investments made by the schemes are subject to reinvestment risk. This risk refers to the interest rate levels at which cash flows received from the securities in the schemes are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed. There have been times in the past, when settlements have been unable to keep pace with the volume of securities transactions, making it difficult to conduct further transactions. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Schemes are not invested and no return is earned thereon.
- **Risk associated with investment in unrated instruments:** The schemes may invest in lower rated / unrated instruments considering the overall risk of the portfolio. This may increase the absolute level of risk of the portfolio. The credit risk & liquidity risk will be relatively higher for lower / unrated instruments as compared to the instruments that have been assigned investment grade ratings. Lower rated / unrated securities also tend to be more sensitive to economic conditions than instruments that have been assigned investment grade ratings.
- **Risks associated with investing in securitised debt:** Schemes may invest in domestic securitised debt such as asset backed securities (ABS) or mortgage backed securities (MBS). ABS means securitised debts wherein the underlying assets are receivables arising from personal loans, automobile loans, etc. MBS means securitised debts wherein the underlying assets are receivables arising from loans backed by mortgage of properties which can be residential or commercial in nature. ABS / MBS instruments reflect the undivided interest in the underlying of assets and do not represent the obligation of the issuer of ABS / MBS or the originator of the underlying receivables. The ABS / MBS holders have a limited recourse to the extent of credit enhancement provided. Securitised debt may suffer credit losses in the event of the delinquencies and credit losses in the underlying pool exceeding the credit enhancement provided. As compared to the normal corporate or sovereign debt, securitized debt is normally exposed to a higher level of reinvestment risk.

(VII) Risk associated with derivatives:

The schemes may use various derivative instruments and techniques, permitted within SEBI Regulation from time to time, which may increase the volatility of fund's performance. Usage of derivatives will expose the schemes to certain risks inherent to such derivatives.

Derivative products are specialized instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies profitably.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

(VIII) Risk factors specific to investments in foreign securities:

To the extent that the assets of the schemes may invest in foreign securities, there may be risks associated with currency movements,

restrictions on repatriation and transaction procedures in overseas market, lack of complete or reliable information, market irregularities or high taxation. Further, the repatriation of capital to India may also be hampered by changes in regulations or political circumstances. Since the scheme may invest predominantly in foreign securities / markets of certain specific countries, there is a country risk which includes events such as introduction of extraordinary exchange controls, economic deterioration, bi-lateral conflict leading to immobilization of the overseas financial assets, political uncertainty, prevailing laws and policy matters including prevalent tax laws of the respective jurisdiction for execution of trades or otherwise applicable for investments in such securities / markets and the jurisdiction through which settlement of such transactions takes place. The fund shall also be exposed to settlement risk, as the country where investment is made might have different settlement periods. Market risks can be greater with respect to political instability, lack of complete or reliable information, market irregularities or high taxation. As the investment will be in securities, which are denominated in foreign currencies, fluctuation in the exchange rates of the foreign currencies may have an impact on the income and value of the fund. It may be noted that if rupee appreciates, it will lead to reduction in returns to investor. The liquidation of securities where investments will be made by the schemes shall be subject to the liquidity / settlement issues of the country of investment / settlement. Non-business days in country of investment / settlement may impact the liquidity of the scheme investments. If due to difference in time zone, in case the AMC is unable to declare the NAV as per provisions stated in this SID, the acceptance of transactions shall be suspended.

(IX) Other Risks:

Other risks including risk associated with inflation, legal risk, taxation risk, valuation risk & operational risk & risk factors associated with processing of transaction in case of investors investing in mutual fund units through Stock Exchange Mechanism as provided in Common Scheme Information Document.

RISK CONTROL MEASURES

Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process. While allocating and choosing securities, the Investment Manager will aim to diversify by gaining broad exposure to different industries and companies in order to reduce risk.

For investments in fixed income instruments, a credit evaluation of each investment opportunity will be undertaken to manage credit risk. The AMC will utilize ratings of recognized rating agencies as an input in the decision making process. The fund manager shall follow the asset allocation pattern in SID under normal circumstances and residual cash may be invested in the collateralized borrowing & lending obligations (CBLO) / repo market, units of mutual fund which seeks to ensure liquidity in the scheme under normal circumstances. There can however be no guarantee against liquidity issues within the scheme.

The AMC may also implement certain internal control procedures / risk & exposure limits etc. for controlling risks which may be varied from time to time.

The scheme may utilize derivative instruments for hedging & portfolio balancing purposes. All Interest Rate Swaps will be undertaken with approved counter parties under pre-approved International Swaps and Derivatives Association (ISDA) agreements. The scheme may also use various derivatives and hedging products from time to time, as would be available and permitted by SEBI / RBI for the purpose of hedging and portfolio rebalancing.

The above risk control measures shall be implemented by the AMC on best effort basis however there can be no guarantee that such measures can completely mitigate the risks involved in scheme.

An Illustration of impact of expense ratio on Scheme's returns:

If an investor A invests in a regular plan of a Scheme with an expense of 2% p.a. and an investor B invests in Direct Plan of the same scheme with an expense of 1% p.a. Assuming the gross return of this fund is 10% for that given year, investor A will make a return of 8% (post expense) for that year, whereas investor B will make 9% return for same period.

Also, please take a look at below illustration which shows impact of different expense ratio assumed on initial investment of Rs. 10,000 invested over period of 10 years with an average annualized gain of 10% p.a.

However, the Investors are requested to fill the blank space with the words such as "Not Applicable" or "Direct" so as to ensure that their application is processed as direct. Alternatively, investors can also strike off the blank space in the broker code field.
- Investors subscribing under Direct Plan of a scheme will have to indicate "Direct Plan" in the application form. Investors should also indicate "Direct" in the ARN column of the application form. However, in case Distributor code is mentioned in the application form, but "Direct Plan" is indicated against the scheme name, the Distributor code will not be considered and the application will be processed under Direct Plan. Direct Plan shall be the default plan if the investor doesn't indicate any plan in the application form or in case of any ambiguity.
- In case, the Broker code is pre-printed on the application form, investors (any / all in case of joint holders) must strike-off the code & countersign before submitting the application form at the applicable collections centres / Official Points of Acceptance of Transaction, if investors requires change in the broker / direct status.
