Investment Strategy	<p>EQUITY INVESTMENT STRATEGY:</p> <p>The investment strategy of the fund will be based on the growth potential of the companies where it would invest. The strategy would entail both top down and bottom-up processes to identify such companies. The fund will invest in equity & equity related securities of companies diversified across</p>

	<p>various industries, which help, reduce concentrated exposure in a particular industry.</p> <p>Stock identification process would include company and business analysis, industry analysis, future plans, projections, technical analysis and valuations. Based on analysis of various financial and non-financial parameters, the stocks will finally be shortlisted for portfolio construction process.</p> <p>The Fund Manager of the scheme would also take cues from the global macroeconomic trends, Government policy and monetary policy actions to decide on the asset allocation. The allocations will be within the limits defined in the asset allocation table.</p> <p>Apart from in-house research, external research is used as an important source of information. Various magazines, journals, newspapers and databases also help in the research process.</p> <p><u>Portfolio Construction</u></p> <p>The fund manager has the primary responsibility for portfolio construction based on the investment objective of the Scheme. Every investment decision taken is by keeping in mind the investment objective of the Scheme and how the security will affect the overall portfolio.</p> <p>In addition, the current macro-economic / industry scenario is also monitored and analyzed to assess any impact on the sector and asset allocation decisions of the fund. Technical views which are relevant to asset allocation, if applicable will also be taken into consideration. The focus would be on long term investing driven by fundamental research. However, short-term performance will also be monitored and evaluated.</p> <p>DEBT INVESTMENT STRATEGY:</p> <p>The Fund Manager would seek to provide risk adjusted returns by optimizing the tradeoffs between liquidity, duration (interest rate movement), and credit quality, depending on the macro- economic, technical, and market factors including future course of system liquidity, interest rates, and other fiscal and monetary variables.</p> <p>The investment strategy starts from analysis, then incorporates limits, looks at portfolio construction and rebalancing, and finally performance monitoring as a feedback loop.</p> <p>The analysis activity starts from macroeconomic analysis, including fiscal and economic factors, impact of global and local events on India's macro-economy, and finally impact of these on the fixed income market. Technical analysis is undertaken as to the likely range of movement, and deciding the timing. Market activity analysis is looked into to determine liquidity of specific</p>

	<p>securities. Credit analysis and monitoring is resorted to, and dovetailed with the other analysis to determine credit quality, and ideal spreads where specific securities ought to be trading at. This is a continuous process. All this analysis is sieved through limit filters set by the investment committee.</p> <p>Based on these results, portfolio construction and rebalancing is carried out. The performance of the portfolio is continuously monitored, and feedback is taken as to the performance of individual securities to test the assumptions behind the analysis. The assumptions are then tweaked from the learning incorporated by the feedback.</p> <p>Based on this learning, fresh analysis is carried out for portfolio rebalancing, and the process continuously iterates.</p>
Risk Profile of the Scheme	<p>Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme specific Risk Factors are summarized below:</p> <p>Investments in equity and equity related instruments involve a degree of risk, both company specific and market risks and thus investors should not invest in the Scheme unless they can afford to take the risk of losing their investment.</p> <p>Equity and Equity Related Instruments by nature are volatile and prone to price fluctuations on a daily basis due to macro and micro economic factors. The value of Equity and Equity Related Instruments may fluctuate due to factors affecting the securities markets such as price volatility, volumes traded, interest rates, currency exchange rates, changes in law/policies of the Government, taxation laws, political, economic or other developments, which may have an adverse impact on individual securities, a specific sector or all sectors. Consequently, the NAV of the Units issued under the Scheme may be adversely affected.</p> <p>The scheme also carries risks associated with investing in debt and money market securities, derivatives. Investments in debt and money market instruments are subject to interest rate risk, re-investment risk, basis risk, credit risk, spread risk, prepayment risk etc.</p> <p>For details on risk factors and risk mitigation measures, please refer SID.</p>
