Investment Objective	The investment objective of the scheme is to generate income through a portfolio comprising money market and debt instruments with residual maturity upto one year. There is no assurance that the investment objective of the Scheme will be realized.		
Asset Allocation Pattern of the scheme	Asset Class Allocation	Normal Allocation (% of net assets)	Risk Profile
	Debt and Money market instruments*.	0-100%	Low
	<p>*Debt securities may include securitized debts up to 50% of the net assets.</p> <p>The Scheme will invest in Debt and Money Market instruments with residual maturity upto one year.</p> <p>The cumulative gross exposure through debt securities, money market securities/instruments and derivatives will not exceed 100% of the net assets of the Scheme.</p> <p>The Scheme may invest in foreign debt securities / instruments.</p> <p>The Scheme will participate in repo of money market and corporate debt securities.</p> <p>The Scheme will engage in short selling of securities and securities lending and borrowing.</p> <p>Trading in Derivatives: To optimally manage portfolio risk, the Scheme may use various derivative instruments and hedging products in a manner permitted by SEBI. The scheme may take exposure to derivative instruments up to 100% of net assets.</p>		
Investment Strategy of the Scheme	The Scheme will invest in money market and debt instruments with residual maturity of upto one year subject to regulatory changes from time to time. The Scheme shall endeavour to minimize credit risk and develop a well-diversified portfolio of money market and debt (including securitized debt) and other instruments. Though every endeavor will be made to achieve the objective of the Scheme, the AMC/Sponsors/ Trustee do not guarantee that the investment objective of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme.		
Risk Profile of the Scheme	<p>Mutual Fund investments are subject to market risks. Please read the SID carefully for details on risk factors before investment. Scheme specific risk factors are summarized below:</p> <p>Credit Risk: Debt instruments carry a Credit Risk, which essentially implies a failure on the part of the issuer of the security to honour its principal or interest repayment obligations. This inability of a credit issuer to honour its obligation is generally a function of underlying performance of the asset, in terms of generating the requisite cashflows. Credit risks of debt securities are rated by</p>		

	<p>independent rating agencies. These ratings range from 'AAA' (read as 'Triple A' denoting 'Highest Safety') to 'D' (denoting 'Default'), with intermediate ratings between the two extremes. Deteriorating credit profile of an issuer may lead to a rating agency lowering the rating on its debt instruments; this is likely to lead to a fall in the price of these instruments.</p> <p>Liquidity Risk: Liquidity risk for debt instruments refers to the possibility that there might not be a ready buyer for the debt instrument at a time when the scheme decides to sell it. Liquidity risk is generally a function of the issuer (government securities are generally more liquid than corporate bonds), ratings (higher rated instruments are generally more liquid), and tenure (near tenure instruments are generally more liquid).</p> <p>Interest-Rate Risk: In case of fixed income bearing debt instruments, when interest rates rise, prices of the securities decline and when interest rates fall, the prices increase. The extent of sensitivity of a security to movement in interest rates is determined by its duration, which is a function of the existing coupon, the payment-frequency of such coupon, and days to maturity. Floating rate securities, with coupon linked to market interest rates have less sensitivity to interest rate risk.</p> <p>Prepayment Risk: Certain fixed income instruments come with a 'call option' which give the issuer the right to redeem the security through prepayment before the maturity date. This option is generally exercised in periods of declining interest rates, and will result in the scheme having to reinvest the proceeds of prepayment at lower yields, resulting in lower interest income.</p>	
Risk Mitigation	<u>Risk & Description specific to Debt</u>	<u>Risk Mitigants/ Management Strategy</u>
	Credit Risk	This risk shall be mitigated by investing in papers which have a high degree of safety. Further this risk is minimal in case of securities issued by central / state government/.
	Liquidity Risk	This risk shall be mitigated by striving to avoid investing in thinly traded securities or securities with lower volumes.
	Interest-Rate Risk	This risk can be mitigated by the fund manager striving to maintain portfolio duration which is appropriate for market conditions.
	Prepayment Risk	This risk can be mitigated by minimizing investments in securities with 'call options', unless favourable market conditions makes investments in such securities attractive.
