DEBT SCHEMES - RISK FACTORS

STANDARD RISK FACTORS:

- (i) Investments in mutual fund units involves investment risks such as market risk, credit & default risk, liquidity risk, trading volumes, settlement risk, including the possible loss of principal.
- (ii) As the price / value / interest rates of the securities including ETFs in which the scheme invests fluctuate, the value of your investment in the schemes may go up or down. The various factors which impact the value of the scheme's investments include, but are not limited to, fluctuations in the bond markets, fluctuations in interest rates, fluctuations in gold prices, prevailing political and economic environment, changes in government policy, factors specific to the issuer of the securities, tax laws, liquidity of the underlying instruments, settlement periods, trading volumes, etc.
- (iii) Past performance of the Sponsor / AMC / Mutual Fund does not guarantee future performance of the schemes.
- (iv) BNP Paribas Monthly Income Plan, BNP Paribas Flexi Debt Fund, BNP Paribas Short Term Income Fund, BNP Paribas Bond Fund, BNP Paribas Money Plus Fund, BNP Paribas Overnight Fund, BNP Paribas Income & Gold Fund, BNP Paribas Government Securities Fund and BNP Paribas Medium Term Income Fund are the names of the schemes and do not in any manner indicate either the quality of the schemes or its future prospects and returns.
- (v) The sponsor / associates are not responsible or liable for any loss resulting from the operation of the schemes beyond the initial contribution of ₹ 1,00,000 (Rupees One lakh only) to the corpus of the Mutual Fund made by it towards setting up the Fund.
- (vi) The present schemes are not guaranteed or assured return schemes.

SCHEMES SPECIFIC RISK FACTORS:

(i) Market Risk:

All mutual funds and securities investments are subject to market risk and there can be no assurance / guarantee that the scheme's objectives will be achieved. The securities that the schemes invests in would be exposed to price changes on a day-to-day basis. These price changes may occur due to instrument-specific factors as well as general macroeconomic conditions.

Markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market, or economic developments. The schemes may be subject to price volatility due to factors such as interest sensitivity, market perception, and creditworthiness of issuer and market liquidity.

Different parts of the market can react differently to these developments. The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole.

(ii) Concentration Risk:

The schemes may pursue only a limited degree of diversification. It may invest a greater proportion of assets in the securities of very few issuers (within the limits permitted by regulation) or be concentrated on a few market sectors. This could have implications on the performance of the schemes. The schemes may be more sensitive to economic, business, political or other changes and this may lead to sizeable fluctuation in the Net Asset Value of the schemes.

(iii) Risks associated with schemes investing in fixed income securities:

Credit and Counterparty Risk: Credit risk or default risk refers to the risk
that an issuer of a fixed income security may default (i.e. will be unable to
make timely principal and interest payments on the security or honor its
contractual obligations).

Counterparty risk refers to the counterparty's inability to honor its commitments (payment, delivery, repayment, etc.) and to risk of default. This risk relates to the quality of the counterparty on which the schemes has exposures. Losses can occur in particular for the settlement / delivery of financial instruments or the conclusion of financial derivatives contracts.

The value of a fixed income security and OTC derivatives will fluctuate depending upon the changes in the perceived level of credit and counterparty risk as well as any actual event of default.

If the credit rating of an issue, issuer or counterparty is downgraded this may cause the value of the related debt securities or OTC derivatives in which the Fund has invested to fall. This Fund might hold large or all amount of its assets to securities with credit rating BBB, or lower in case of downgrading. This could present a much higher than average risk.

The severity of the risk varies depending on the quality of the securities and derivatives in the Fund. To the extent that the Fund invests in high-yield bonds, this presents a higher than average risk. There are different types of debentures available in the market. Some of them could be more risky. Lower-quality debt securities and certain types of securities involve greater risk of default or price changes due to changes in the credit quality of the issuer. They are not in the first rank of debts in case of default. The value of lower-quality debt securities and certain types of other securities can be more volatile due to increased sensitivity to adverse issuer, political, regulatory, market or economic developments.

- Liquidity Risk: The liquidity of the scheme's investment is inherently restricted

by trading volumes in the securities in which the schemes invests.

A lower level of liquidity affecting an individual security or derivative or an entire market at the same time, may have an adverse bearing on the value of the scheme's assets. More importantly, this may affect the scheme's ability to sell particular securities and derivatives quickly enough to minimize impact cost, as and when necessary to meet requirements of liquidity or to sell securities in response to triggers such as a specific economic / corporate event

Trading volumes, settlement periods and transfer procedures may restrict the liquidity of a few or all of the investments and may affect the liquidity of the investments of the schemes. Transactions in ETFs can also become restricted.

The schemes may be unable to implement purchase or sale decisions when the markets turn illiquid, missing some investment opportunities or limiting ability to face redemptions. The lack of liquidity could also lead to the risk that the sale price of a security could be substantially lower than the fair value of the security.

Treatment and disposal of illiquid securities / NPAs at the time of closure of the Scheme: Such securities will be valued in good faith in accordance with the Valuation Policy. Further SEBI regulations / provisions (vide SEBI Circular MFD/CIR/05/432/2002 dated June 20, 2002) shall apply for such securities. Accordingly any amount realized by the mutual fund after the winding up of the schemes from such NPAs and illiquid securities, if substantial and realized within two years shall be distributed back to the investors. In case the amount is not substantial or it is realized after two years, it may be transferred to the Investor Education Fund maintained as specified in SEBI circular MFD/CIR/9/120/2000 dated November 24, 2000. The decision as to the determination of substantial amount shall be taken by the trustees of mutual fund after considering the relevant factors.

 Interest Rate Risk & Re-investment Risk: The value of an investment may be affected by interest rate fluctuations. Interest rates may be influenced by several elements or events, such as monetary policy, the discount rate, inflation, etc.

The value of debt and fixed income securities held by the schemes generally will vary inversely with the changes in prevailing interest rates. In general, price of debt and fixed income securities go up when interest rates fall, and vice versa.

Securities of any issuer that has higher duration could be more risky in terms of price movements relative to those with lower duration. Thus any impact of interest rate changes would be higher on securities with higher duration irrespective of the status of the issuer of the security.

The investments made by the schemes are subject to reinvestment risk. This risk refers to the interest rate levels at which cash flows received from the securities in the schemes are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.

There have been times in the past, when settlements have been unable to keep pace with the volume of securities transactions, making it difficult to conduct further transactions. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the schemes are not invested and no return is earned thereon.

Sovereign Risk: The Central Government of India is the issuer of the local currency debt in India. The Government raises money to meet its capital and revenue expenditure by issuing debt or discounted securities. Since payment of interest and principal amount has a sovereign status implying least probability of a default, such securities are known as securities with sovereign credit. It also implies that the credit risk on such Government securities is even lower than that on non-government securities with "AAA" rating and hence yields on government securities are even lower than yields on non-government securities with "AAA" rating.

(iv) Risk associated with investment in unrated instruments:

The schemes may invest in lower rated / unrated instruments considering the overall risk of the portfolio. This may increase the absolute level of risk of the portfolio. The credit risk & liquidity risk will be relatively higher for lower / unrated instruments as compared to the instruments that have been assigned investment grade ratings. Lower rated / unrated securities also tend to be more sensitive to economic conditions than instruments that have been assigned investment grade ratings.

(v) Risks associated with Securities Lending:

The risks in lending portfolios securities as with other extensions of credit consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the Schemes and the approved intermediary. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Mutual Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.

DEBT SCHEMES - RISK FACTORS (Contd..)

(vi) Risks associated with investing in securitised debt:

The Schemes may invest in domestic securitized debt such as asset backed securities (ABS) or mortgage backed securities (MBS). ABS means securitized debts wherein the underlying assets are receivables arising from personal loans, automobile loans, etc. MBS means securitized debts wherein the underlying assets are receivables arising from loans backed by mortgage of properties which can be residential or commercial in nature. ABS / MBS instruments reflect the undivided interest in the underlying of assets and do not represent the obligation of the issuer of ABS / MBS or the originator of the underlying receivables. The ABS / MBS holders have a limited recourse to the extent of credit enhancement provided. Securitized debt may suffer credit losses in the event of the delinquencies and credit losses in the underlying pool exceeding the credit enhancement provided. As compared to the normal corporate or sovereign debt, securitized debt is normally exposed to a higher level of reinvestment risk.

Pass through Certificate (PTC) (Pay through or other Participation Certificates) represents beneficial interest in an underlying pool of cash flows. These cash flows represent dues against single or multiple loans originated by the sellers of these loans. These loans are given by banks or financial institutions to corporates. PTCs may be backed, but not exclusively, by receivables of personal loans, car loans, two wheeler loans and other assets subject to applicable regulations.

How the risk profile of securitized debt fits into the risk appetite of the schemes

Securitized debt is a form of conversion of normally non-tradable loans to transferable securities. This is done by assigning the loans to a special purpose vehicle (a trust), which in turn issues Pass-Through-Certificates (PTCs). These PTCs are transferable securities with fixed income like characteristics. The risk of investing in securitized debt is similar to investing in debt securities in addition, securitized debt may also carry prepayment risk and has a relatively higher liquidity risk (the same are explained in the sections that follow). However, if the fund manager evaluates that the additional risks are suitably compensated by the higher returns, he may invest in securitized debt up to the limits specified in the asset allocation table. The investment shall be in securitized instruments that are top rated (AAA/ A1+) or its equivalent, by a recognised credit rating agency for the retail pool, and for single loan securitization, limits will be assigned as per the internal credit policy of the Fund

Policy relating to originators

The originator is the person who has initially given the loan. The originator is also usually responsible for servicing the loan (i.e. collecting the interest and principal payments). An analysis of the originator is especially important in case of retail loans as this affects the credit quality and servicing of the PTC. Originators may be: Banks, Non Banking Finance Companies, Housing Finance Companies, etc. The fund manager's evaluation will be based on the track record of the originator, delinquencies in the pool and the seasoning of the pool. Other factors that will be considered are loan type, size of the loan, average original maturity of the pool, Loan to Value Ratio, geographical distribution, liquid facility, default rate distribution, credit enhancement facility and structure of the pool.

(vii) Risk associated with each kind of originator:

- (a) Prepayment Risk: MBS and ABS are subject to prepayment risk. When the underlying loans are paid off by the borrower prior to their respective due dates, this is known as a prepayment. It could be triggered on account of various factors particularly in periods of declining interest rates. The possibility of such prepayment may require the schemes to reinvest the proceeds of such investments in securities offering lower yields, thereby reducing the scheme's interest income.
- (b) Interest Rate Risk: MBS carry interest rate risk. Home loan borrowers are provided the facility of refinancing their loans at the prevailing interest rates. A lowering of interest rates could induce a borrower to pay his loan off earlier than the scheduled tenure, whereas if the interest rates move upward, the borrower would tend to hold on to his loan for a longer period, thus increasing the maturity of the bond. The maturity of the bond could therefore shorten or lengthen, depending on the prevailing interest rates.
- (c) Credit Risk / Default Risk: MBS and ABS also carry credit or default risk. MBS and structures carry built -in credit enhancement in different forms. However, any delinquencies would result in reduction of the principal amount if the amount available in the credit enhancement facility is not enough to cover the shortfall. Historically, housing loans have had lower default rates than other forms of credit.
- (d) Price Risk / Liquidity Risk: MBS and ABS are subject to prepayment risk. Limited volumes of trading in securitized paper in secondary market could restrict or affect the ability of the schemes to re-sell them. Thus these trades may take place at a discount, depending on the prevailing interest rates.

(viii) Risk associated with derivatives:

The schemes may use various derivative instruments and techniques,

permitted within SEBI Regulations from time to time only for portfolio balancing and hedging purpose, which may increase the volatility of scheme's performance. Usage of derivatives will expose the Fund to certain risks inherent to such derivatives.

Derivative products are specialized instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will always be able to execute such strategies profitably. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. There is a possibility that a loss may be sustained by the Schemes as a result of the failure of another party (usually referred to as the "counterparty") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, interest rates and indices. Even a small price movement in the underlying instrument could have a large impact on their value. This could increase the volatility of the Scheme's performance.

In case of hedge, it is possible that derivative positions may not be perfectly in line with the underlying assets they are hedging. As a consequence the derivative cannot be expected to perfectly hedge the risk of the underlying assets. This also increases the volatility of the Scheme's performance.

Some of the risks inherent to derivatives investments include:

- (a) Price Risk: Despite the risk mitigation provided by various derivative instruments, there remains an inherent price risk which may result in losses exceeding actual underlying.
- (b) Default Risk: This is the risk that losses will be incurred due to default by counter party. This is also known as credit risk or counterparty risk.
- (c) Basis Risk: This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying being hedged for e.g. mismatch between the maturity date of the futures and the actual selling date of the asset.
- (d) Limitations on upside: Derivatives when used as hedging tool can also limit the profits from a genuine investment transaction.
- (e) Liquidity risk: This risk pertains to how saleable a security is in the market. All securities / instruments irrespective of whether they are equity, bonds or derivatives may be exposed to liquidity risk (when the sellers outnumber buyers) which may impact returns while exiting opportunities.

(ix) Risk factors specific to investments in foreign securities:

To the extent that the assets of the schemes may invest in foreign securities, there may be risks associated with currency movements, restrictions on repatriation and transaction procedures in overseas market, lack of complete or reliable information, market irregularities or high taxation. Further, the repatriation of capital to India may also be hampered by changes in regulations or political circumstances. Since the scheme may invest predominantly in foreign securities / markets of certain specific countries, there is a country risk which includes events such as introduction of extraordinary exchange controls, economic deterioration, bi-lateral conflict leading to immobilization of the overseas financial assets, political uncertainty, prevailing laws and policy matters including prevalent tax laws of the respective jurisdiction for execution of trades or otherwise applicable for investments in such securities / markets and the jurisdiction through which settlement of such transactions takes place. The fund shall also be exposed to settlement risk, as the country where investment is made might have different settlement periods. Market risks can be greater with respect to political instability, lack of complete or reliable information, market irregularities or high taxation. As the investment will be in securities, which are denominated in foreign currencies, fluctuation in the exchange rates of the foreign currencies may have an impact on the income and value of the fund. It may be noted that if rupee appreciates, it will lead to reduction in returns to investor. The liquidation of securities where investments will be made by the schemes shall be subject to the liquidity / settlement issues of the country of investment / settlement. Non-business days in country of investment / settlement may impact the liquidity of the schemes investments. If due to difference in time zone, in case the AMC is unable to declare the NAV as per provisions stated in this SID, the acceptance of transactions shall be suspended.

(x) Risk factors specific to BNP Paribas Monthly Income Plan (risk associated with scheme investing in Equities):

The risks associated with investments in equities and similar instruments include significant fluctuations in prices. The impact of fluctuations is likely to be accentuated for short-term investments. The risk that the performance of one or more companies declines or stagnates may have a negative impact on the performance of the Scheme as a whole at any given time.

DEBT SCHEMES - RISK FACTORS (Contd..)

Stock markets are volatile and can decline significantly in response to political, regulatory, economic, market and stock-specific developments etc. Different parts of the market can react differently to these developments. The stock-specific volatility may also change over a period of time as the characteristic of the stock undergoes a change in terms of market-cap category.

The Scheme may hold such securities for only a very short time, which could tend to increase the costs. The Scheme may invest in growth stocks which may be more volatile than the market in general and may react differently to economic, political and market developments and to specific information about the issuer. Growth stocks traditionally show higher volatility than other stocks, especially over short periods. These stocks may also be more expensive in relation to their profits than the market in general. Consequently, growth stocks may react with more volatility to variations in profit growth.

The Fund Manager may temporarily adopt a more defensive approach if it considers that the equity market or economy is experiencing excessive volatility, a persistent general decline, or other unfavourable conditions. In such circumstances, the Scheme may be unable to achieve or pursue its investment objective.

The Scheme may invest in companies making an initial public offering. In such cases there is a risk that the price of the newly floated share is more volatile due to factors such as the absence of previous trading, unseasonal transactions and the limited number of securities available for trading.

(xi) Risk factors specific to BNP Paribas Income & Gold Fund (risk associated with investments in Gold ETFs):

- 1 The price of gold may fluctuate due to various reasons, for examples:
 - Global gold supplies and demand, which is influenced by factors such as forward selling by gold producers, purchases made by gold producers to unwind gold hedging positions, central bank purchases and sales and productions and cost levels in major gold producing countries.
 - Investor's expectation with respect to the rate of inflation.
 - Currency exchange rates
 - Interest rates
 - Investment and trading activities of commodity funds / hedge funds
 - Global or regional political or economic or financial events and
 - Central Bank actions
 - Inflation trends and interest rate changes
 - Geo-political concerns
- In addition, there is no assurance that gold will maintain its long term value in terms of purchasing power in the future. In the event that the price of gold declines, the value of investment in units in which the scheme has invested will decline proportionately.
- There may be certain circumstances that may motivate large scale sale of gold by the issuer of Gold ETFs, which could decrease the price of gold and adversely affect the value of investment in the Gold ETFs in which the scheme has invested.
- 4. The gold underlying the Gold ETFs may be subject to loss, damage, theft, or restriction on access. There is a risk that part or all of the underlying gold of the gold ETFs could be lost, damaged or stolen. Access to such gold could also be restricted by natural events (such as earthquake) or human actions (such as terrorist attack). Any of these actions may adversely affect investment value of the Gold ETFs in which the scheme has invested.
- 5. Investment in gold is subject to impact cost. Impact costs are implicit costs which are paid by liquidity demanders to liquidity providers. Generally the best bid and ask prices quoted in the market are for only small transactions. Larger transactions may have to be executed at even less favourable prices. The additional cost is called an impact cost. For e.g. if the ruling market price of a security is ₹ 500/- one may be able to buy / sell small quantities for that price. But if one wishes to buy / sell huge quantities, he may have to pay / receive higher / lower price. Similarly, absence of adequate liquidity in Gold ETFs may impact the cost of purchasing and selling the Gold ETF units.
- Changes in indirect taxes like custom duties for import, sales tax, VAT or any other levies will have an impact on the valuation of gold and consequently the NAV of the units in which the Scheme has invested.
- Conversion of underlying physical gold to the units of the Gold ETFs may attract capital gain tax depending on acquisition cost and holding period.
- 8. Any changes in trading regulations by the stock exchange(s) or SEBI may affect the ability of authorised participant to arbitrage resulting into wider premium / discount to NAV. Any changes in the regulations relating to import and export of gold or gold jewellery (including customs duty, sales tax and any such other statutory levies) may affect the ability of the Gold ETFs to buy / sell gold against the purchase and redemption requests received.
- There is no exchange for physical gold in India. The Gold ETFs may have to buy or sell gold from the open market, which may lead to counter party risks for the Gold ETFs for trading and settlement.

10. The Gold ETFs has to sell gold only to RBI approved bullion bankers and canalising agents who are authorized to buy gold. Though, there are adequate numbers of players (commercial or bullion bankers) to whom the scheme can sell gold. The Gold ETFs may have to resort to distress sale of gold if there is no or low demand for gold to meet its cash needs of redemption or expenses.

(xii) Other Risks:

- (a) Risk associated with inflation: Over time, yields of short-term investments may not keep pace with inflation, leading to a reduction in an investment's purchasing power.
- b) Legal Risk: The schemes may be affected by the actions of government and regulatory bodies. Legislation could be imposed retrospectively or may be issued in the form of internal regulations which the public may not be aware of. Legislation (including legislation relating to tax) or regulation may be introduced which inhibits the schemes from pursuing their strategies or which renders an existing strategy less profitable than anticipated. Such actions may take any form, for example nationalization of any institution or restrictions on investment strategies in any given market sector or changing requirements and imposed without prior warning by any regulator.
- (c) Taxation Risk: The value of an investment may be affected by the application of tax laws, including withholding tax, or changes in government or economic or monetary policy from time to time. As such, no guarantee can be given that the financial objectives will actually be achieved. The tax information described in this Schemes Information Document is as available under the prevailing taxation laws and could be changed at any moment by regulation. Further, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of an investment in the schemes will endure indefinitely.
- (d) Valuation Risk: This risk relates to the fact that markets, in specific situations and due to lack of volumes of transactions, do not enable an accurate assessment of the fair value of invested assets. In such cases, valuation risk represents the possibility that, when a financial instrument matures or is sold in the market, the amount received is less than anticipated, incurring a loss to the portfolio and therefore impacting negatively the NAV of the schemes.
- (f) Operational Risk: Operational risk addresses the risk of trading and back office or administration issues that may result in a loss to the Scheme. This could be the result of oversight, ineffective securities processing procedures, computer systems problems or human error. There could also be risk associated with grouping of orders. For instance, at the time of placing the trades, the fund manager shall group orders on behalf of all schemes managed by him, provided it is unlikely to be detrimental overall for any of the schemes whose orders have been included. However, such grouping may have a detrimental effect to the scheme compared to the execution of an individual order for the scheme
- (g) Risk factors associated with processing of transaction in case of investors investing in Mutual Fund units through Stock Exchange Mechanism: The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and / or redemption of Units through NSE and / or BSE or any other recognized stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing / settlement, etc. upon which the Fund and the AMC have no control. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s) upon which the Fund and the AMC have no control. Accordingly, there could be negative impacts to the investors such as delay or failure in allotment / redemption of Units. The Fund and the AMC are not responsible for the negative impacts.

RISK CONTROL MEASURES

Since investing requires disciplined risk management, the AMC would endeavour to incorporate adequate safeguards for controlling risks in the portfolio construction process. A credit evaluation of each investment opportunity will be undertaken to manage credit risk. The AMC will utilise ratings of recognised rating agencies as an input in the decision making process. The fund manager shall follow the asset allocation pattern in SID under normal circumstances and residual cash may be invested in the collateralised borrowing & lending obligations (CBLO) / repo market, units of liquid funds. There can however be no guarantee against liquidity issues within the schemes.

The AMC may also implement certain internal control procedures / risk & exposure limits etc. for controlling risks which may be varied from time to time.

The schemes may utilise derivative instruments for hedging & portfolio balancing purposes. All Interest Rate Swaps will be undertaken with approved counter parties under pre approved International Swaps and Derivatives Association (ISDA) agreements. The schemes may also use various derivatives and hedging products from time to time, as would be available and permitted by SEBI / RBI for the purpose of hedging and portfolio rebalancing.

The above risk control measures shall be implemented by the AMC on best effort basis however there can be no guarantee that such measures can completely mitigate the risks involved in schemes.

Fortnightly	Transfer on 1st & 15th of a month	Rs. 1000 and in multiples of Re. 1 thereafter

^ Investors should note that in case of Daily STP, the commencement date for transfers shall be the 15th working day from the date of receipt of a valid request and thereafter, transfers shall be effected on all business days at NAV based prices, subject to applicable load. In case the Weekly / Fortnightly / Monthly / Quarterly STP execution date falls on non-business day, the next business day will be considered as date of transfer. In the event of an intervening non-business day STP triggers will not take place and consequently the total number of Daily STP installments opted by the investor will be adjusted to that extent i.e., For e.g. if the investor has opted for 50 installments and if 8 nonbusiness days happen to occur in the intervening period, then only 42 Daily STP installments shall be triggered.

the balance amount, if any, shall remain invested in the Transferor Scheme.

An investor will have to opt for a minimum of 20 installments under Daily option, 6 installments under Weekly, Fortnightly, Monthly option and 2 installments for Quarterly STP otherwise enrolment request shall be liable to rejected.

- An investor has to maintain minimum balance of Rs. 6000 in the opted Transferor Scheme at the time of enrolment of STP. If such minimum balance represented by clear units is not available, the application will be liable to be rejected.
- 9. An investor has to clearly specify the name & the option of the Transferor & Transferee scheme in the enrolment form. If name of the Transferor or Transferee Scheme is not stated or incase of any ambiguity STP enrolment request shall be liable to rejected. In absence of information, the default option for Transferee scheme shall be growth option.
- Load structure of the Transferor Scheme & Transferee Schemes as on the date of enrolment of STP shall be applicable.
- 11. An investor has to select any one facility i.e. FSTF or CASTF. In case, investor doesn't select any facility or in case of any ambiguity, the STP enrolment request shall be rejected. In case investor has selected any one of the facility but has not selected frequency and / or date or incase of any ambiguity, by default, monthly frequency & 7th day shall be considered as frequency & execution date respectively. Investors should note that CASTF facility is not available for Daily STP.
- 12. In FSTF, in case there is no minimum amount (as specified above) available in the unit holder's account for Transfer into Transferee Scheme, the transfer shall not be executed and the request of unit holder will stand withdrawn with immediate effect.
 - For Daily STP: If the outstanding balance in "Transferor Scheme" does not cover any of the intermittent Daily STP installment amount, all outstanding units will be liquidated and Daily STP effected for such outstanding balance and Daily STP terminated for subsequent installments. However, if the outstanding balance in "Transferor Scheme" does not cover the last installment under the Daily STP, no transfer shall be effected and Daily STP shall be terminated without effecting the last installment under Daily STP.
- 13. In CASTF, if there is no minimum appreciation amount in the Transferor scheme for the consecutive three installments, the STP request of the unitholder will stand withdrawn with immediate effect. The capital appreciation, if any, will be calculated from the enrolment date of the CASTF under the folio, till the first transfer date [e.g. if the unit holder has been allotted units on the 23rd of September and the date of enrolment for monthly CASTF is the 1st of November and the unit holder has opted for 15th of every month as the transfer date, capital appreciation, if any, will be calculated from the 1st of November to the 15th of November transfer date). Subsequent capital appreciation, if any, will be the capital appreciation between the previous CASTF date (where transfer has been processed) and the next CASTF date].
- 14. A request for STP will be treated as a request for redemption from the Transferor scheme and subscription into the selected Transferee scheme(s), option(s) / plan(s), at the applicable NAV, subject to load and statutory levy, if any.
- 15. In case of minor applicant, the guardian can opt for STP only till the date of minor attaining majority. AMC shall suspend the standing instruction of STP enrollment from the date of minor attaining majority by giving adequate prior notice. Further, once the minor attains majority, the guardian will not be able undertake any financial and non-financial transactions including fresh registration of STP and the folio shall be frozen for the further operation till the time requisite documents for changing the status from minor to major is submitted to the Fund.
- 16. STP will be automatically terminated if all units are liquidated or withdrawn from the Transferor Scheme or pledged or upon receipt of intimation of death of unit holder.
